

Australia and New Zealand Lung Transplant Registry

ANZLUNG

The ANZLUNG is funded by the Australian Government.

All Australian and New Zealand Lung Transplant Units provide information to ANZLUNG about people who have had a lung transplant

The ANZLUNG will assist hospital teams to learn more about people receiving lung transplants and the care they receive

It is your decision if you wish to participate in ANZLUNG or not. Whether you participate or not, does not effect the care you will receive from your hospital team

Your hospital care team will collect routine information about all lung transplant patients. This information is combined with information from all lung transplant units

Information received is transferred in a secure and safe way. The computer systems are protected and there are many security measures to ensure your information is kept safe

Reports using information collected in ANZLUNG are sent to hospitals so they learn more about the care being provided to lung transplant patients across Australia and New Zealand

Each year a annual report will be available on the ANZLUNG website
